

NIGHTANGLE CRM

MODULE 4

AI Calling Engine

Design & Development Plan with Figma Make Prompts

Version 1.0 • April 2026
Audience: Product, Design, Frontend, Backend, AI, QA
Status: Draft — Pending Confirmation

Table of Contents

Part 1 — Design System & Visual Language

Part 2 — Screen Inventory & Information Architecture

Part 3 — Step-by-Step Figma Make Prompts (18 Screens)

Step 1: AI Calling Dashboard (Command Center)

Step 2: Campaign Manager — List & Overview

Step 3: Campaign Builder — Multi-Step Wizard

Step 4: AI Agent Configuration Studio

Step 5: Agent Behavioral Profile Editor

Step 6: Live Call Monitor (Real-Time)

Step 7: Call Detail & Transcript Viewer

Step 8: Conversation Flow Builder (Visual)

Step 9: Prompt Template Editor

Step 10: Inbound Call Setup & IVR Router

Step 11: Human Handoff & Transfer Queue

Step 12: Call Analytics & Reporting Dashboard

Step 13: Recording & Transcript Library

Step 14: Cost Governance & Budget Controls

Step 15: Compliance & Consent Manager

Step 16: Standalone Mode — Lead Upload & Webhook Config

Step 17: Call Scheduling & Retry Logic Settings

Step 18: Empty States & Onboarding Screens

Part 4 — Prototype Routing & Interaction Map

Part 5 — Design Execution Timeline (4-Week Sprint)

Part 6 — Post-Design Handoff Checklist

Part 1 — Design System & Visual Language

1.1 Design Philosophy

The AI Calling Engine is a high-stakes, real-time operational tool. Users monitor live calls, configure AI personas, and manage campaigns that execute thousands of automated conversations. The UI must convey trust, control, and intelligence.

Core Design Principles

- Mission Control Aesthetic — The dashboard should feel like a command center: data-dense, real-time, visually authoritative
- AI-Visible — Every AI decision, action, and insight must be surfaced clearly with distinct visual treatment (bot icons, AI badges, confidence scores)
- Real-Time Confidence — Live call monitors must update without page refresh; pulse animations, live counters, waveform visualizations
- Dual-Mode Clarity — Standalone vs CRM-integrated modes must be clearly distinguished in navigation and context
- Guardrails Visible — Cost limits, compliance rules, and safety controls should always be visible, never buried

1.2 Design Tokens (Consistent with Module 3)

Token	Value	Usage
Primary	#4F46E5 (Indigo 600)	Buttons, active states, links
AI Accent	#8B5CF6 (Violet 500)	AI-specific elements, bot indicators
Success	#10B981 (Emerald 500)	Connected calls, positive outcomes
Destructive	#EF4444 (Red 500)	Failed calls, errors, budget alerts
Warning	#F59E0B (Amber 500)	Pending states, attention needed
Live/Active	#06B6D4 (Cyan 500)	Live call indicators, real-time pulses
Background	#F9FAFB / #111827	Content area / Sidebar
Text Primary	#111827	Headings, body text
Text Secondary	#6B7280	Labels, timestamps, metadata
Font (UI)	Inter	All interface text
Font (Data)	JetBrains Mono	IDs, phone numbers, durations, code
Border Radius	8px / 6px / 12px	Cards / Buttons & inputs / Modals
Spacing Base	4px	All spacing multiples

1.3 AI-Specific Visual Language

Throughout the AI Calling Engine, all AI-originated actions and content must be visually distinct from human actions:

- **AI Bot Icon:** A small rounded-square bot icon in violet (#8B5CF6) appears next to any AI-generated content
- **AI Actions Badge:** A subtle “AI” pill badge in violet background with white text
- **Confidence Meters:** Circular or bar indicators showing AI confidence percentages
- **Sentiment Colors:** Green (positive), Yellow (neutral), Orange (mixed), Red (negative/frustrated)
- **Live Pulse:** A cyan (#06B6D4) pulsing dot for any real-time/live element
- **Waveform Visualization:** Audio waveforms for call recordings and live calls use indigo gradient fills

Part 2 — Screen Inventory & Information Architecture

2.1 Complete Screen Map (24 Screens)

#	Screen	Type	Priority
1	AI Calling Dashboard (Command Center)	Core	P0
2	Campaign Manager — List & Overview	Core	P0
3	Campaign Builder — Multi-Step Wizard	Core	P0
4	AI Agent Configuration Studio	Core	P0
5	Agent Behavioral Profile Editor	Core	P0
6	Live Call Monitor (Real-Time)	Core	P0
7	Call Detail & Transcript Viewer	Core	P0
8	Conversation Flow Builder (Visual)	Core	P1
9	Prompt Template Editor	Config	P1
10	Inbound Call Setup & IVR Router	Config	P1
11	Human Handoff & Transfer Queue	Core	P1
12	Call Analytics & Reporting Dashboard	Analytics	P1
13	Recording & Transcript Library	Core	P1
14	Cost Governance & Budget Controls	Admin	P1
15	Compliance & Consent Manager	Admin	P1
16	Standalone Mode — Lead Upload & Webhooks	Config	P2
17	Call Scheduling & Retry Logic Settings	Config	P2
18	Empty States & Onboarding	UX	P1
19	Call Disposition & Tagging Config	Config	P2
20	AI Agent Performance Comparison	Analytics	P2
21	Telephony Provider Settings	Admin	P2
22	Notification & Alert Rules	Config	P2
23	Mobile — Live Monitor & Call Review	Mobile	P2
24	Standalone Dashboard (No CRM)	Core	P2

2.2 Navigation Structure

Within the Nightangle sidebar, the AI Calling Engine sits under "AI Agents" with these sub-navigation items:

- Dashboard (Command Center)
- Campaigns
- AI Agents
- Live Monitor

- Call Library
- Analytics
- Settings (Flows, Compliance, Costs, Telephony)

Part 3 — Step-by-Step Figma Make Prompts

Each step below contains the exact prompt to paste into Figma Make, followed by refinement notes. All prompts use the Nightangle design system established in Part 1.

Step 1 — AI Calling Dashboard (Command Center)

Purpose: The operational nerve center. Users see real-time call activity, campaign performance, AI agent status, and key metrics at a glance. This is the first screen users see when entering the AI Calling section.

FIGMA MAKE PROMPT — AI Calling Dashboard

Design a real-time AI Calling command center dashboard for a SaaS CRM platform called "Nightangle CRM". This is the main dashboard for an AI-powered calling engine that makes automated voice calls to leads. Use a dark sidebar (already present) with light content area.

TOP METRICS ROW (4 stat cards with subtle shadows):

- Card 1: "Live Calls" – large number "12" with a cyan pulsing dot indicator, subtitle "currently active", small sparkline showing last hour activity
- Card 2: "Calls Today" – "1,847" with green up arrow "+23% vs yesterday"
- Card 3: "Connect Rate" – "68.4%" with a mini circular progress ring in green
- Card 4: "Avg Duration" – "3m 42s" in monospace font, subtitle "target: 4m 00s"

SECOND ROW (two equal-width cards):

LEFT CARD – "Live Call Activity" (real-time feed):

- Title with cyan pulse dot "Live Now"
- Show 5 active call rows:
 - Row 1: Bot avatar + "AI Agent: Priya" calling "Rajesh Kumar, Mehta Jewellers" – Duration: 2:34 (counting up) – Status: "Active" cyan badge – Sentiment: Happy face (green) – Campaign: "Jewellery Software Q2"
 - Row 2: Bot avatar + "AI Agent: Amit" calling "Suresh Patel, Patel Traders" – 1:12 – "Active" – Neutral face (yellow)
 - Row 3: Bot avatar + "AI Agent: Priya" calling "+91 87654 32109" – 0:08 – "Ringing" amber badge
 - Row 4: Bot avatar + "AI Agent: Neha" – "Wrapping Up" gray badge – generating summary
 - Row 5: Human icon + "Transferred to Deepak V." – "On Hold"
- Each row has: Listen button (headphone icon), Barge-in button, End Call button (red)
- "View All Live Calls →" link at bottom

RIGHT CARD – "Today's Call Outcomes" (donut chart):

- Donut chart with segments:
 - Interested (green): 34%
 - Callback Requested (blue): 22%

Not Interested (red): 18%
No Answer (gray): 15%
Voicemail (light gray): 8%
Transferred to Human (orange): 3%

- Legend below the chart with counts next to each

THIRD ROW (two cards):

LEFT CARD — "Campaign Performance" (horizontal bar chart):

- Show 4 campaigns as horizontal bars:
 - "Jewellery Software Q2" — 456/600 calls — 76% — green bar
 - "Trading Platform Outreach" — 312/500 calls — 62% — yellow bar
 - "Production Module Upsell" — 89/200 calls — 45% — orange bar
 - "Collection Reminder Mar" — 234/300 calls — 78% — green bar
- Each bar shows: campaign name, calls completed/total, completion %

RIGHT CARD — "AI Agent Status" (agent cards):

- Show 4 AI agents as mini cards:
 - Agent 1: "Priya (Sales)" — Online (green dot) — 145 calls today
 - Rating: 4.2/5 stars
 - Agent 2: "Amit (Support)" — Online — 98 calls — 4.5/5
 - Agent 3: "Neha (Collections)" — Busy (amber dot) — 67 calls — 3.8/5
 - Agent 4: "Survey Bot" — Offline (gray dot) — 0 calls — N/A
- Each card has a "Configure" gear icon

BOTTOM BAR — Quick Actions:

- "Start New Campaign" button (indigo)
- "Create AI Agent" button (outline)
- "View All Recordings" text link
- "Cost This Month: INR 12,450 / INR 50,000 budget" with progress bar

Style: Mission-control feel with real-time energy. Clean metric cards, modern charts. Use Inter font, monospace for numbers and durations. Cyan (#06B6D4) for live indicators, indigo for primary actions. Subtle card shadows. Professional and data-rich like Datadog or Grafana dashboards but cleaner.

After Generation — Refine:

- Add auto-refresh indicator (spinning icon with "Updating every 5s" label)
- Add date range selector for metrics (Today / This Week / This Month / Custom)
- Add notification bell with alert for failed calls or budget threshold
- Ensure all numbers use monospace font for alignment

Step 2 — Campaign Manager — List & Overview

Purpose: View, manage, and monitor all AI calling campaigns. Campaigns are the primary organizational unit for outbound calls.

FIGMA MAKE PROMPT — Campaign Manager

Design a Campaign Manager list page for an AI calling CRM platform. This shows all calling campaigns with their status and performance.

PAGE HEADER:

- Title: "AI Campaigns" with count badge "(12)"
- "Create Campaign" primary button (indigo)
- View toggle: Card View (active) | Table View
- Filter bar: Status dropdown (All, Active, Paused, Completed, Draft), Agent dropdown, Date range picker

CAMPAIGN CARDS (2-column grid, 6 cards visible):

Card 1 — "Jewellery Software Q2":

- Status badge: "Active" (green, pulsing dot)
- Progress bar: 456/600 leads called (76%)
- Metrics row: Connect Rate: 68% | Interested: 34% | Avg Duration: 3m 42s
- AI Agent: "Priya (Sales)" with bot avatar
- Schedule: "Mon-Sat, 10AM-6PM IST"
- Bottom row: "Started Mar 15" | "Budget: INR 8,200/15,000"
- Action buttons: Pause (icon), Edit (icon), Analytics (icon), Menu (three dots)

Card 2 — "Trading Platform Outreach":

- Status: "Active" (green)
- Progress: 312/500 (62%)
- Similar metrics layout

Card 3 — "Production Module Upsell":

- Status: "Paused" (amber badge)
- Progress: 89/200 (45%)
- Pause reason: "Budget limit reached" in small amber text

Card 4 — "Collection Reminder March":

- Status: "Completed" (gray badge with checkmark)
- Progress: 300/300 (100%)
- Results summary: "Recovery rate: 42%, Total recovered: INR 4.2L"

Card 5 — "Customer Satisfaction Survey":

- Status: "Draft" (dotted border, muted colors)
- "0/150 leads" — Not started
- "Complete Setup →" link in indigo

Card 6 — "New Product Launch Teaser":

- Status: "Scheduled" (blue badge with clock)
- "Starts Apr 10, 2026" — 0/800 leads

Each card has:

- Thin left border color matching status (green/amber/gray/blue)
- Hover state with slight lift shadow
- Quick-action icons in top right corner

Style: Clean card grid, good data density per card without clutter. Modern SaaS aesthetic like Monday.com or Attio. Inter font, indigo accents, subtle shadows on cards.

After Generation — Refine:

- Add campaign duplication action in the menu
- Design the table view alternative with sortable columns
- Add bulk action toolbar for multi-select campaigns
- Add campaign archiving functionality

Step 3 — Campaign Builder — Multi-Step Wizard

Purpose: Create and configure a new AI calling campaign through a guided wizard. This covers lead selection, agent assignment, scheduling, scripting, and compliance settings.

FIGMA MAKE PROMPT — Campaign Builder Wizard

Design a multi-step campaign creation wizard for an AI calling engine in a CRM platform. Show it as a full-page experience with a step indicator.

STEP INDICATOR (top, horizontal):

Steps: 1. Basics | 2. Audience | 3. AI Agent | 4. Script & Flow | 5. Schedule | 6. Compliance | 7. Review & Launch
Show Step 1 as active (filled indigo), rest as empty circles connected by lines.

STEP 1 — "Campaign Basics" (current view):

- Campaign Name * (text input, placeholder "e.g., Q2 Sales Outreach")
- Campaign Type * (visual card selector, 2x2):
 - "Outbound Sales" (phone-outgoing icon, selected with indigo border)
Description: "AI calls leads to book meetings and qualify interest"
 - "Collections" (wallet icon)
Description: "Automated payment reminders and recovery calls"
 - "Support Follow-up" (headset icon)
Description: "Post-ticket satisfaction and resolution calls"
 - "Survey & Feedback" (clipboard icon)
Description: "Automated survey calls to capture responses"
- Deployment Mode * (toggle with explanation):
 - "CRM-Integrated" (selected) — "Full lead context from CRM pipeline"
 - "Standalone" — "Upload leads separately, outcomes via webhook"
- Priority Level: Low | Medium (selected) | High | Urgent (radio pills)
- Campaign Tags: Tag input with suggestions
- Internal Notes: Text area (optional)

STEP 2 — "Select Audience" (show as second frame):

- Source selector tabs: CRM Leads | CSV Upload | API/External
- For "CRM Leads" selected:
 - Pipeline filter: "Sales Pipeline" dropdown
 - Stage filter: Multi-select checkboxes (New Lead, Contacted, etc.)
 - Score range: Dual slider (0-100)
 - Location filter: City/State multi-select
 - Owner filter: User multi-select
 - Tags filter: Tag selector
- Preview: "247 leads match these criteria" with "Preview List" button
- Lead list preview table (collapsed, expandable):
5 rows showing Name, Phone, Score, Stage, Last Activity
- Manual exclusions: "Exclude leads contacted in last ___ days" (number input)
- DND check: "Exclude DND-registered numbers" checkbox (checked)

FOOTER (persistent across all steps):

- "Cancel" (left)
- "← Previous" (left, disabled on step 1)
- Step indicator dots

- "Next: Select Audience →" primary button (right)

Style: Clean wizard interface with clear step progression. Each step should be well-organized with logical grouping. Card selectors for campaign type should be visually appealing with icons. Inter font, indigo accents. Modern and professional.

After Generation — Refine:

- Design Steps 3-7 individually (AI Agent selection, Script editor, Schedule picker, Compliance, Review)
- Add campaign template gallery for quick starts
- Design the "Preview List" expandable panel
- Add estimated cost calculator based on lead count and call duration

Step 4 — AI Agent Configuration Studio

Purpose: Create and manage AI calling agents. Each agent is a configurable persona with voice, language, tone, and behavioral settings that can be reused across campaigns.

FIGMA MAKE PROMPT — AI Agent Studio

Design an AI Agent Configuration Studio for a voice AI calling platform.
This page lets users create and manage AI calling agent personas.

PAGE HEADER:

- Title: "AI Agents" with count "(6)"
- "Create New Agent" button (indigo with bot icon)
- Search bar to filter agents

AGENT GALLERY (card grid, 3 columns):

Agent Card 1 — "Priya (Sales)":

- Large avatar area: Stylized bot icon with a feminine design accent in violet, initials "PS" overlay
- Agent type badge: "Sales" (green pill)
- Status: "Active" (green dot) — "3 campaigns"
- Voice: "Female, Hindi + English" with small speaker icon
- Personality tags: "Persuasive", "Warm", "Professional"
- Performance: "4.2/5 avg rating" with 5 mini stars
- Stats row: "12,450 total calls" | "3m 38s avg"
- Action buttons: Edit | Duplicate | Deactivate | three-dot menu

Agent Card 2 — "Amit (Support)":

- Bot icon with blue design accent
- "Support" badge (blue pill)
- Active — 2 campaigns
- "Male, Hindi" voice
- "Helpful", "Patient", "Empathetic" tags
- 4.5/5 rating | 8,200 calls | 5m 12s avg

Agent Card 3 — "Collection Bot":

- Bot icon with amber design accent
- "Collections" badge (amber pill)
- Active — 1 campaign
- "Male, Hindi + English" voice
- "Firm", "Professional", "Clear" tags
- 3.8/5 | 4,100 calls | 2m 55s avg

Agent Card 4 — "Survey Bot":

- Bot icon with gray accent
- "Survey" badge (gray pill)
- Inactive (gray dot) — 0 campaigns
- "Female, English"
- "Neutral", "Concise" tags

Agent Card 5 — "Neha (Multilingual)":

- "Sales" badge

- Active – 1 campaign
- "Female, Hindi + Marathi + English"
- "Persuasive", "Regional", "Friendly"

Agent Card 6 – "+ Create Agent" (dashed border card):

- Large "+" icon
- "Create New AI Agent"
- "Start from scratch or use a template"

BOTTOM SECTION – "Agent Templates" (horizontal scroll):

- Pre-built template cards (smaller):
 - "Sales Closer", "Gentle Reminder", "Survey Conductor",
 - "Appointment Setter", "Product Demo Booker"
- Each with: icon, name, one-line description, "Use Template" button

Style: Gallery/card layout with personality. Agent cards should feel distinct – each agent should have its own subtle color accent to differentiate personas. Bot icons should be modern and abstract, not cartoonish. Inter font, violet (#8B5CF6) for AI elements, indigo for primary actions. Clean and professional.

After Generation — Refine:

- Add agent cloning workflow
- Design agent testing modal (test call preview)
- Add A/B variant support (Agent A vs Agent B for same campaign)
- Add voice preview audio player on each card

Step 5 — Agent Behavioral Profile Editor

Purpose: Deep configuration panel for an AI agent's personality, voice, language, and conversation behavior. This is the detailed edit view when creating or editing an agent.

FIGMA MAKE PROMPT — Agent Profile Editor

Design an AI Agent behavioral profile editor for a voice AI platform. This is a detailed configuration page shown when creating or editing an AI calling agent. Use a two-column layout.

HEADER:

- Back arrow "← Back to Agents"
- Agent name: "Priya (Sales)" (editable inline)
- Status toggle: Active/Inactive switch
- "Save Changes" primary button, "Test Agent" outline button with play icon, "Discard" text link

LEFT COLUMN (60% width):

SECTION 1 — "Voice & Language Configuration":

- Voice Provider: Dropdown (ElevenLabs, Google TTS, Azure, Custom)
- Voice Selection: Dropdown with play preview buttons next to each option ("Kavya - Female", "Ravi - Male", "Ananya - Female")
Show a small audio waveform preview player
- Primary Language: Dropdown "Hindi" with flag icon
- Secondary Languages: Multi-select "English, Marathi"
- Language Detection: Toggle ON — "Auto-detect caller's language and switch"
- Speaking Speed: Slider from 0.5x to 2.0x, currently at 1.0x with "Normal" label
- Filler Words: Toggle ON — "Include natural fillers (hmm, accha, theek hai)"

SECTION 2 — "Personality & Tone":

- Formality Level: Slider with labels
"Casual ←●→ Formal" (positioned at 70% formal)
- Empathy Tone: Slider
"Direct ←●→ Empathetic" (positioned at 60% empathetic)
- Assertiveness: Slider
"Soft ←●→ Assertive" (positioned at 50%)
- Personality Preview: A small card showing sample dialogue:
"Based on your settings, Priya would say:"
'Namaste Rajesh ji! Main Priya bol rahi hoon Nightangle se. Aapne humari jewellery software ke baare mein inquiry ki thi. Kya aapke paas 2 minute hain?'
(This preview updates as sliders change)

SECTION 3 — "Conversation Guardrails":

- Max Call Duration: Number input "5" minutes
- Silence Threshold: Number input "8" seconds — "End call after silence"
- Max Retries (no answer): Number input "3"
- Prohibited Topics: Tag input ("Competitor pricing", "Legal advice",

```
"Personal opinions")
- Required Disclosures: Checklist:
  ✓ "This call is from an AI assistant"
  ✓ "This call may be recorded"
  ○ "Custom disclosure..." (text input)
- Escalation Trigger Words: Tag input ("speak to human", "manager",
  "complaint", "cancel")

RIGHT COLUMN (40% width):

SECTION 4 – "Agent Preview Card":
- Visual preview of how this agent appears in campaign selection
- Shows the agent card as it would look in the gallery

SECTION 5 – "Performance Summary" (if existing agent):
- Total Calls: 12,450
- Avg Duration: 3m 38s
- Connect Rate: 72%
- Positive Sentiment: 64%
- Avg Confidence Score: 87%
- Mini line chart showing performance over last 30 days

SECTION 6 – "Assigned Campaigns":
- List of campaigns using this agent:
  • "Jewellery Software Q2" – Active (green dot)
  • "Trading Platform Outreach" – Active
  • "Product Demo Follow-ups" – Paused (amber)
- "Assign to Campaign" text link

Style: Settings/editor page with clear sections and visual sliders.
The personality preview card is a key differentiator – it should feel
interactive and real-time. Inter font, violet for AI-specific elements.
Clean, well-spaced, professional.
```

After Generation — Refine:

- Make personality preview update in real-time as sliders change
- Add voice sample recording/upload for custom voice clones
- Add agent versioning (Version 1, Version 2 with diff)
- Add "Test Call" button that triggers a demo call to the user's phone

Step 6 — Live Call Monitor (Real-Time)

Purpose: Real-time operational view showing all active calls. Supervisors can listen, barge in, whisper to AI, or take over calls. This is a mission-critical real-time screen.

FIGMA MAKE PROMPT — Live Call Monitor

Design a real-time Live Call Monitor screen for an AI calling platform. This is a mission-control view where supervisors monitor all active AI calls simultaneously. It should feel like a call center dashboard.

TOP BAR:

- Title: "Live Monitor" with cyan pulsing dot
- Real-time counters (large monospace numbers):
"12 Active" (cyan) | "3 Ringing" (amber) | "2 On Hold" (gray) | "1 Transferring" (orange)
- Auto-refresh indicator: "Live • Updated 2s ago"
- "Start New Call" button and "Pause All" emergency button (red outline)

MAIN GRID (3-column grid of active call cards):

CALL CARD 1 (highlighted – active, white card with cyan left border):

- Top: AI Agent avatar + "Priya" on left, Call duration "3:42" counting up on right (monospace, cyan)
- Lead info: "Rajesh Kumar" (bold) | "Mehta Jewellers" | "+91 98765 43210"
- Campaign: "Jewellery Software Q2" (small tag)
- LIVE WAVEFORM: An audio waveform visualization (horizontal bars animating) in indigo gradient – showing real-time audio activity
- Sentiment indicator: Happy face icon (green) with "Positive" label
- AI Confidence: 89% (circular mini gauge)
- Current Topic: "Discussing pricing for 3-store setup" (italic, gray)
- Action buttons row:
 - Listen (headphone icon) – "Monitor call silently"
 - Whisper (message icon) – "Send instruction to AI"
 - Barge In (phone-incoming icon) – "Join the call"
 - End Call (phone-off, red icon)

CALL CARD 2 (amber border – attention needed):

- "Amit" calling "Suresh Patel, Patel Traders"
- Duration: 5:12
- Sentiment: Confused face (amber) – "Neutral/Uncertain"
- AI Confidence: 62% (yellow gauge)
- Warning badge: "Low confidence – consider intervention"
- Current Topic: "Customer asking about competitor comparison"

CALL CARD 3 (green border – going well):

- "Neha" calling "Priya Mehta, Gold Palace"
- Duration: 1:45
- Sentiment: Happy (green) – "Positive"
- Confidence: 94%
- Current Topic: "Scheduling demo for next week"

CALL CARD 4 (red border – escalating):

- "Collection Bot" calling "Dinesh Shah"

- Duration: 2:30
- Sentiment: Angry face (red) – "Frustrated"
- Confidence: 45%
- ALERT badge: "Escalation requested – waiting for human agent"
- "Accept Transfer" blinking button

CALL CARD 5 (gray, muted – ringing):

- "Priya" calling "+91 76543 21098" (unknown lead)
- Status: "Ringing..." with animated dots
- Attempt: "2 of 3"

CALL CARD 6 (gray – wrap-up):

- "Amit" – just completed call
- Status: "Generating Summary..."
- Outcome preview: "Interested – Demo Booked"
- Loading spinner on summary

RIGHT SIDEBAR (collapsible, 280px):

- "Activity Feed" (reverse-chronological):
 - "3:42 PM – Rajesh Kumar answered (Priya)" ✓
 - "3:41 PM – +91 87654 failed, retry 2/3" ✗
 - "3:40 PM – Suresh Patel: sentiment drop detected" Δ
 - "3:38 PM – Demo booked: Ananya Sharma" ✓
 - "3:35 PM – Transfer: Dinesh Shah → Deepak V." →
- Show 10+ feed items with appropriate icons and colors

Style: Mission control / call center dashboard aesthetic. Dark cards with light backgrounds, real-time feel. Cyan for live elements, status-colored borders on each card. The waveform should feel alive and dynamic. Monospace for durations and phone numbers. Inter font. Professional, authoritative, data-dense.

After Generation — Refine:

- Add audio waveform animation (CSS keyframe for the bars)
- Design the “Whisper” modal for sending instructions to AI mid-call
- Add call queue view (upcoming scheduled calls)
- Design the grid/list view toggle
- Add sound alerts for escalation events

Step 7 — Call Detail & Transcript Viewer

Purpose: Deep-dive view of a single completed call showing the full transcript, AI analysis, actions taken, recording playback, and outcome details.

FIGMA MAKE PROMPT — Call Detail & Transcript

Design a Call Detail page for an AI calling platform. This shows the complete record of a single AI call including transcript, recording, analysis, and actions taken. Use a two-column layout.

HEADER:

- Back arrow "← Back to Call Library"
- Call ID: "#CALL-2026-04847" (monospace)
- Lead name: "Rajesh Kumar – Mehta Jewellers"
- Call date: "April 1, 2026 at 2:30 PM IST"
- Duration badge: "4m 32s"
- Outcome badge: "Interested – Demo Booked" (green pill)
- AI Agent: Bot icon + "Priya (Sales)"

LEFT COLUMN (65% width):

AUDIO PLAYER (full-width card):

- Large waveform visualization (indigo gradient fill) showing the full call audio
- Play/Pause button, progress scrubber, current time / total time
- Speed control: 0.5x | 1x (active) | 1.5x | 2x
- Download recording button
- Volume slider
- Speaker indicators on waveform: Blue sections = AI speaking, Green sections = Customer speaking

TRANSCRIPT SECTION:

- Title: "Call Transcript" with "Search transcript" search bar
- Toggle: "Full Transcript" | "Key Moments Only"
- Transcript as chat-style conversation:

AI (Priya) [0:00]: "Namaste Rajesh ji! Main Priya bol rahi hoon Nightangle CRM se. Aapne humari jewellery software ke baare mein inquiry ki thi. Kya aapke paas 2 minute hain?"

Customer [0:08]: "Haan haan, boliye. Maine form fill kiya tha Meta pe."

AI (Priya) [0:12]: "Bilkul! Aapka Mehta Jewellers mein kitne stores hain currently?"

Customer [0:18]: "Teen stores hain Mumbai mein. Aur ek naya kholne ka plan hai Pune mein."

AI (Priya) [0:25]: "Bahut accha! Toh aapke liye humara multi-location inventory module perfect rahega..."

- Each message has:
 - Speaker label with colored avatar (blue for AI, green for customer)
 - Timestamp clickable (jumps to that point in audio)
 - Sentiment indicator per turn (emoji icon)
 - Key moment markers (star icon for important turns)

RIGHT COLUMN (35% width):

AI ANALYSIS CARD:

- Overall Sentiment: "Positive" (green smiley, large)
- Confidence Score: 89/100 (circular gauge)
- Intent Detected: "High Purchase Intent" (green badge)
- Key Objections: "None detected" (gray)
- Engagement Level: "High" with bar indicator

CALL SUMMARY (AI-generated):

- "Customer confirmed 3 retail stores in Mumbai with expansion plans. Expressed strong interest in inventory + billing modules. Budget approved up to 5L. Demo scheduled for April 4, 2026 at 10:00 AM. No objections raised."
- "Edit Summary" text link

ACTIONS TAKEN (during/after call):

- Checklist style:
 - ✓ Lead stage updated: Contacted → Qualified
 - ✓ Demo scheduled: Apr 4, 2026 10:00 AM
 - ✓ Note added to lead profile
 - ✓ Follow-up WhatsApp sent
 - ✓ Tag added: "High Value"
 - ✓ Score updated: 65 → 85

CALL METADATA:

- Call Type: Outbound
- Campaign: "Jewellery Software Q2"
- Telephony: VoIP Provider A
- Call Cost: INR 2.40
- Retry Attempt: 1 of 3
- Consent Captured: Yes (recording enabled)

Style: Clean detail page with rich information. The audio player should be prominent and well-designed. Transcript should feel like a chat conversation. Right sidebar provides quick analysis. Inter font, monospace for timestamps and IDs. Indigo and violet accents for AI elements.

After Generation — Refine:

- Add click-to-jump from transcript timestamp to audio position
- Design keyword highlighting in transcript search
- Add "Export Transcript" as PDF/TXT options
- Add sentiment graph over call duration (line chart)

Step 8 — Conversation Flow Builder (Visual)

Purpose: Visual node-based editor for designing deterministic conversation flows. Used when campaigns need strict scripting control rather than open-ended AI prompting.

FIGMA MAKE PROMPT — Conversation Flow Builder

Design a visual conversation flow builder for an AI calling platform. This is a node-based drag-and-drop editor similar to n8n or Voiceflow where users design the call script as a flowchart.

HEADER:

- Title: "Conversation Flow Editor"
- Flow name: "Jewellery Software – Sales Call" (editable)
- Status: "Draft" (yellow badge) / "Published" (green)
- Buttons: "Save", "Publish" (indigo), "Test Flow" (outline), "Version History"

LEFT PANEL – Node Palette (240px, collapsible):

Draggable node blocks organized by category:

TRIGGERS:

- Call Connected (phone icon)
- Inbound Answer (phone-incoming)

CONVERSATION:

- Greeting Node (hand-wave icon)
- Speak/Say (message icon)
- Listen/Capture (mic icon)
- Verification Node (shield icon)
- Question Node (help-circle)

LOGIC:

- Decision Branch (git-branch)
- Sentiment Check (emoji)
- Keyword Match (search)
- AI Free-Form (brain icon) – "Let AI improvise"
- Wait/Pause (clock)

ACTIONS:

- Update CRM (database)
- Schedule Callback (calendar)
- Send WhatsApp (message)
- Add Note (pencil)
- Transfer to Human (user-plus)

TERMINAL:

- End Call – Success (check-circle, green)
- End Call – Failed (x-circle, red)
- End Call – Callback (clock, amber)

CANVAS (center, dot-grid background):

Show a conversation flow with these connected nodes:

```

START: "Call Connected" (blue rounded node)
↓
NODE 1: "Greeting" – "Namaste! Main [Agent Name] bol raha/rahi hoon
[Company] se." (green node)
↓
NODE 2: "Verification" – "Kya main [Lead Name] ji se baat kar
raha/rahi hoon?" (orange node)
↓ Yes branch          ↓ No branch
NODE 3: "Speak"        NODE 3b: "Ask for correct person"
↓                      ↓ → End Call (Wrong Person)
NODE 4: "AI Free-Form" – "Discuss product interest based on
campaign context" (violet node with brain icon, special styling
with dashed animated border)
↓
NODE 5: "Decision Branch" – "Is customer interested?" (diamond
shape, yellow)
↓ Interested          ↓ Not Interested
NODE 6a: "Schedule Demo"  NODE 6b: "Thank & Close"
↓                      ↓
NODE 7a: "Send WhatsApp confirmation"  NODE 7b: "End Call – Not Interested"
↓
END: "End Call – Demo Booked" (green terminal)

```

Show connecting arrows between nodes with labels on branches.

RIGHT PANEL – Node Properties (320px, shown for selected node):

Selected: "AI Free-Form" node

- Node Name: "Product Discussion" (editable)
- AI Behavior: Dropdown "Open Discussion" / "Guided Q&A" / "Objection Handling"
- AI Prompt Instructions: Text area with:
"Discuss the product features relevant to the customer's business.
Focus on inventory management and billing. If they mention
competitors, acknowledge but redirect to our strengths."
- Max Duration: "90 seconds" (number input)
- Fallback: "If AI confidence drops below 60%, transfer to human"
- Exit Conditions: "Customer says interested/not interested/callback"

BOTTOM BAR:

- Zoom controls (+ / - / fit), minimap toggle
- Undo/Redo buttons
- "Flow Validation" button with green checkmark "All nodes connected"
- "Test Run" button to simulate the flow

Style: Clean node-based editor with clear visual hierarchy. Nodes should have colored left borders matching their category. The "AI Free-Form" node should look special – it's where AI takes over from the script. Canvas has subtle dot grid. Modern, similar to Voiceflow or Retool Workflows but cleaner. Inter font, good use of color to distinguish node types.

After Generation — Refine:

- Add node connection validation (prevent impossible flows)
- Design the "Test Run" simulation mode with step-by-step execution

- Add variables panel for dynamic content insertion
- Add flow templates gallery

Step 9 — Prompt Template Editor

Purpose: For prompt-based (non-flow) campaigns, users need to write and manage prompt stacks that define how the AI agent behaves during calls.

FIGMA MAKE PROMPT — Prompt Template Editor

Design a Prompt Template Editor for an AI calling platform. This is where users write and manage the prompt instructions that guide AI agent behavior during calls. Use a split-pane layout.

HEADER:

- Title: "Prompt Templates"
- "Create Template" button (indigo)
- Search/filter bar

LEFT PANEL — Template List (280px):

- List of saved templates as selectable rows:
 - "Sales — Jewellery Software" (active, indigo highlight)
Used in: 2 campaigns | Last edited: 2 days ago
 - "Collections — Payment Reminder"
Used in: 1 campaign | Last edited: 1 week ago
 - "Support — Post-Ticket Follow-up"
Used in: 1 campaign
 - "Survey — NPS Score Collection"
Draft (not used)
 - "+ New Template" (dashed border row)

RIGHT PANEL — Editor (main area):

TEMPLATE HEADER:

- Name: "Sales — Jewellery Software" (editable)
- Version: "v3" (with version history dropdown)
- "Save" button, "Duplicate" button

PROMPT STACK (vertically stacked, each in a card):

Card 1 — "System Role" (blue left border):

- Label: "SYSTEM ROLE DEFINITION"
- Text editor (code-like, monospace, with line numbers):
"You are Priya, a friendly and professional sales representative for Nightangle CRM. You speak Hindi and English fluently. Your goal is to understand the customer's business needs and book a product demo. You work for a software company that sells CRM and ERP solutions to Indian businesses."
- Char count: "342 / 1000"

Card 2 — "Objective Instructions" (green left border):

- Label: "OBJECTIVE & GOALS"
- Text editor:
 1. Confirm the lead's identity and business details
 2. Understand their current software setup and pain points
 3. Explain relevant Nightangle features (focus on their industry)

4. If interested, schedule a demo within the next 7 days
5. If not interested, note the reason and thank them"

Card 3 – "Compliance Disclosures" (red left border, marked required):

- Label: "MANDATORY DISCLOSURES" (with lock icon)
- Text: "You MUST say the following within the first 15 seconds:
'Yeh call AI assistant dwara ki ja rahi hai aur ise record kiya ja sakta hai.'"
- Toggle: "Must complete before proceeding" (ON)

Card 4 – "Disallowed Statements" (amber left border):

- Label: "PROHIBITED CONTENT"
- List:
 - "Never discuss competitor products by name"
 - "Never make pricing commitments above listed rates"
 - "Never share other customer information"
 - "Never provide legal or financial advice"
- "+ Add Prohibition" button

Card 5 – "Context Variables" (gray left border):

- Label: "DYNAMIC CONTEXT (injected at call time)"
- Variable chips: {lead_name}, {company_name}, {lead_source}, {previous_interactions}, {campaign_objective}, {product_interest}
- Each chip is draggable into the prompt text areas above

BOTTOM – "Test Preview":

- "Preview with sample lead" button
- Shows a simulated AI opening statement based on the prompt stack with a sample lead's data filled in

Style: IDE-like editor experience with clear card-based prompt stack. Each prompt layer should have a distinct colored border. Text editors should feel like code editors (monospace, line numbers, syntax coloring for variables). Clean, professional, developer-friendly but accessible. Inter font for labels, JetBrains Mono for prompt content.

After Generation — Refine:

- Add syntax highlighting for variable references ({lead_name})
- Add prompt validation (check for required disclosures)
- Add A/B prompt testing interface
- Add prompt performance analytics (which prompts lead to better outcomes)

Step 10 — Inbound Call Setup & IVR Router

Purpose: Configure inbound call handling — provisioned numbers, AI routing, caller identification, and transfer logic for when customers call in.

FIGMA MAKE PROMPT — Inbound Call Setup

Design an Inbound Call Configuration page for an AI calling platform. This lets admins set up phone numbers, AI agent routing, and caller identification for inbound calls.

HEADER:

- Title: "Inbound Call Setup"
- Subtitle: "Configure how AI handles incoming customer calls"
- Toggle: "Inbound AI Enabled" (ON/OFF switch, currently ON with green indicator)

SECTION 1 — "Phone Numbers" (card):

- Table of provisioned numbers:

Number	Label	AI Agent	Status	Calls Today
+91 22 4000 1234	"Mumbai Sales"	Priya (Sales)	Active ✓	34
+91 22 4000 1235	"Mumbai Support"	Amit (Support)	Active ✓	18
+91 80 4000 5678	"Bangalore Sales"	Neha	Inactive ✗	0
1800-123-4567	"Toll Free"	Round-Robin	Active ✓	52
- "Add Number" button, "Request New Number" link

SECTION 2 — "Call Routing Logic" (visual flow):

Show a simple top-down routing flow:

Incoming Call

↓

Caller ID Lookup (CRM match?)

↓ Yes

Load Lead Profile

↓

Route by Campaign

↓

AI Agent Answers

↓

[Conversation]

↓

Resolution / Transfer / Callback

↓ No

Collect Name + Phone

↓

Route by Default Agent

SECTION 3 — "Caller Identification Settings":

- "Match by phone number" checkbox (checked)
- "Match by caller ID" checkbox (checked)
- "If caller unknown:" radio buttons:
 - "AI collects identity details" (selected)
 - "Transfer to human immediately"
 - "Play recorded message and disconnect"
- "Minimum data to collect from unknown callers:"

Checkboxes: ✓ Name, ✓ Phone, ○ Email, ○ Company

SECTION 4 — "Business Hours & Availability":

- Working hours grid (Mon-Sun rows, start/end time columns):

Mon: 9:00 AM – 7:00 PM ✓
Tue: 9:00 AM – 7:00 PM ✓
... (similar for other days)
Sun: OFF ✗

- "After hours behavior:" dropdown:
"Play voicemail greeting and record message"
- Timezone: "Asia/Kolkata (IST)" dropdown

Style: Clean settings page with logical sections. The routing flow should be a simple visual diagram, not overly complex. Business hours grid should be easy to edit. Inter font, indigo accents. Professional admin interface.

After Generation — Refine:

- Add IVR menu builder for multi-option routing
- Design voicemail greeting recorder/uploader
- Add call queue settings (max wait time, queue music)
- Add number porting request workflow

Step 11 — Human Handoff & Transfer Queue

Purpose: Manage the human agent transfer queue when AI escalates or customers request a human. Shows pending transfers, available agents, and transfer history.

FIGMA MAKE PROMPT — Human Handoff Queue

Design a Human Handoff & Transfer Queue page for an AI calling platform. This shows pending call transfers from AI to human agents.

HEADER:

- Title: "Transfer Queue" with count badge "(4 pending)"
- Audio alert toggle: "Sound alerts" (ON)
- "Available Agents: 3/5" status indicator

TOP SECTION — Active Transfer Cards (2x2 grid):

Transfer Card 1 (URGENT — red pulsing border):

- "WAITING 02:34" (countdown timer, large, red)
- Lead: "Dinesh Shah, Shah Enterprises"
- Reason: "Customer requested human agent" (red badge)
- AI Summary: "Customer frustrated about billing charges. Wants to speak to manager. Has been a customer for 2 years. Outstanding amount: INR 45,000."
- Sentiment: Angry (red face)
- Campaign: "Collections March"
- AI Agent: "Collection Bot"
- Buttons: "Accept Call" (green, prominent), "Forward to Manager", "Send to Voicemail"

Transfer Card 2 (HIGH — amber border):

- "WAITING 01:12"
- Lead: "Priya Mehta, Gold Palace Jewellers"
- Reason: "AI confidence dropped below threshold" (amber badge)
- AI Summary: "Customer asking detailed technical questions about API integration. AI unable to provide specific answers."
- Sentiment: Neutral
- Buttons: Accept / Forward / Voicemail

Transfer Card 3 (NORMAL — blue border):

- "WAITING 00:28"
- Lead: "Amit Verma, TechVista Solutions"
- Reason: "Payment negotiation required" (blue badge)
- AI Summary: "Customer willing to pay but requesting 30-day extension. Needs human authorization."
- Buttons: Accept / Forward

Transfer Card 4 (COMPLETED — gray, faded):

- "Transferred to Deepak V." — "2 min ago"
- Duration with human: "4:15"
- Outcome: "Resolved — Payment plan agreed"

BOTTOM SECTION — "Available Human Agents":

```
- Table: Agent Name | Status | Current Call | Transfers Today | Accept
Priya Sharma | Available ✓ | - | 3 | Accept button
Deepak Verma | On Call | Dinesh Shah (4:15) | 5 | Busy
Neha Gupta | Available ✓ | - | 2 | Accept button
Amit Patel | Break | - | 4 | Unavailable
Rohit Singh | Available ✓ | - | 1 | Accept button
```

SIDEBAR (collapsible) – "Transfer History":

```
- Chronological list of today's transfers:
"3:42 PM – Dinesh Shah → Deepak V. (Customer request)" ✓
"3:15 PM – Suresh P. → Priya S. (Low confidence)" ✓
"2:50 PM – Unknown Caller → Voicemail" ⌘
"2:30 PM – Rajesh K. → Amit P. (Payment negotiation)" ✓
```

Style: Urgent/queue management interface. The waiting timer should feel prominent and create urgency. Red borders for urgent transfers, amber for high priority. Clean cards with AI summaries prominently displayed. Inter font. The "Accept Call" button should be large and green to encourage fast response.

After Generation — Refine:

- Add audio notification for new transfers
- Design the warm transfer experience (AI briefing screen)
- Add SLA indicators (exceeded wait time turns red)
- Add auto-routing rules for transfer queue

Step 12 — Call Analytics & Reporting Dashboard

Purpose: Comprehensive analytics view covering call volume, outcomes, agent performance, campaign ROI, sentiment trends, and cost analysis.

FIGMA MAKE PROMPT — Call Analytics Dashboard

Design a Call Analytics & Reporting dashboard for an AI calling platform. This shows comprehensive metrics with charts and filters.

HEADER:

- Title: "Call Analytics"
- Date range picker: "Last 30 Days" (with presets: Today, 7D, 30D, 90D, Custom)
- Filters: Campaign dropdown, AI Agent dropdown, Call Type (Outbound/Inbound/All)
- "Export Report" button (PDF/CSV dropdown)

TOP METRICS (6 stat cards in a row):

- Total Calls: 4,847 (+12% ↑)
- Connected: 3,296 (68% connect rate)
- Avg Duration: 3m 42s
- Positive Outcome: 1,121 (34%)
- Human Transfers: 148 (4.5%)
- Total Cost: INR 11,632 (INR 2.40/call avg)

CHART ROW 1 (two charts side by side):

LEFT — "Call Volume Over Time" (area chart):

- X-axis: Days of the month
- Y-axis: Number of calls
- Two lines: "Attempted" (indigo) and "Connected" (green)
- Shaded area between them
- Hover tooltips showing daily breakdown

RIGHT — "Call Outcomes Distribution" (stacked bar chart):

- X-axis: Weeks
- Y-axis: Percentage
- Stacked segments: Interested, Callback, Not Interested, No Answer, Voicemail, Transferred
- Color-coded with legend

CHART ROW 2 (two charts):

LEFT — "Sentiment Analysis Trend" (line chart):

- Three lines: Positive (green), Neutral (yellow), Negative (red)
- Over time (daily)
- Annotation markers for significant events

RIGHT — "Agent Performance Comparison" (grouped bar chart):

- X-axis: Agent names (Priya, Amit, Neha, Collection Bot, Survey Bot)
- Grouped bars: Connect Rate, Positive Outcome %, Avg Confidence
- Different colors per metric

BOTTOM SECTION — "Campaign Performance Table":

- Sortable table:

Campaign	Calls	Connected	Interest %	Avg Duration	Cost	ROI	
Jewellery Software Q2	456	312	38%	3:42	INR 1,094	4.2x	
Trading Platform	312	198	29%	3:15	INR 749	3.1x	
Collections March	234	189	N/A	2:55	INR 562	6.8x	
NPS Survey	150	112	N/A	1:45	INR 360	N/A	

- Sparkline mini-charts in each row showing trend

Style: Analytics dashboard with clean, modern charts. Use a charting library aesthetic (like Recharts or Mixpanel). Cards with subtle shadows, good color coding. Data-rich but scannable. Inter font, monospace for numbers. Indigo primary, multi-color for chart segments.

After Generation — Refine:

- Add drill-down capability (click chart segment to filter)
- Add scheduled report delivery (email weekly digest)
- Design comparison mode (compare two campaigns side by side)
- Add cohort analysis view

Step 13 — Recording & Transcript Library

Purpose: Searchable library of all call recordings and transcripts with filtering, playback, and bulk actions.

FIGMA MAKE PROMPT — Recording Library

Design a Call Recording & Transcript Library page for an AI calling platform. This is a searchable, filterable library of all past calls.

HEADER:

- Title: "Call Library" with count "(4,847 calls)"
- Search bar: "Search transcripts, leads, keywords..."
(this searches WITHIN transcript content)
- "Export Selected" button

FILTER BAR:

- Date range picker
- Campaign dropdown
- AI Agent dropdown
- Outcome filter: All | Interested | Callback | Not Interested | No Answer | Transferred
- Sentiment filter: All | Positive | Neutral | Negative
- Duration filter: All | <1min | 1-3min | 3-5min | >5min
- "Has Recording" toggle

CALL LIST (table with expandable rows):

Each row shows:

| Play ▶ | Lead Name | Phone | Campaign | Agent | Duration | Outcome | Sentiment | Date |

Row 1: ▶ | Rajesh Kumar | +91 98765... | Jewellery Q2 | Priya | 4:32 | Interested ✓ (green) | Positive 😊 | Apr 1, 2:30 PM
[Expandable: Shows transcript preview, AI summary, actions taken]

Row 2: ▶ | Suresh Patel | +91 87654... | Trading | Amit | 5:12 | Callback 🔄 (blue) | Neutral 😐 | Apr 1, 11:00 AM

Row 3: × (no recording) | Unknown | +91 76543... | Collections | Collection Bot | 0:45 | No Answer × (gray) | N/A | Apr 1, 10:30 AM

Row 4: ▶ | Ananya Sharma | +91 65432... | Jewellery Q2 | Priya | 3:18 | Not Interested × (red) | Negative 😞 | Mar 31

Show 8-10 rows with varied outcomes and sentiments.

EXPANDED ROW (show for Row 1):

- Audio mini-player (waveform + play/pause + scrub)
- Transcript preview (first 4 exchanges, truncated)
- AI Summary card
- Quick actions: "View Full Detail", "Download Recording", "Add to Training Set", "Flag for Review"

BULK ACTIONS (appears when rows selected):

- "Download Selected (3)", "Export Transcripts", "Add to Training",

"Delete"

PAGINATION:

- "Showing 1-25 of 4,847" | Page navigation | "50 per page" dropdown

Style: Library/media browser feel. Clean table with inline audio players. Sentiment emojis add personality. Expandable rows for quick preview without leaving the list. Inter font, monospace for durations and phone numbers. Modern, clean, filterable.

After Generation — Refine:

- Add full-text transcript search with keyword highlighting
- Design bulk download as ZIP functionality
- Add "Star/Favorite" for bookmarking notable calls
- Add AI-powered search (e.g., "find calls where customer mentioned competitor")

Step 14 — Cost Governance & Budget Controls

Purpose: Prevent runaway costs with configurable budget ceilings, call duration limits, retry caps, and real-time spend tracking.

FIGMA MAKE PROMPT — Cost Governance

Design a Cost Governance & Budget Control page for an AI calling platform. This is an admin page for managing calling costs and preventing overruns.

HEADER:

- Title: "Cost Governance"
- Subtitle: "Monitor spending and configure safety limits"
- "Budget Alert Settings" gear button

TOP SECTION — "Current Month Spending" (large visual card):

- Large circular budget gauge:
 - Spent: INR 12,450
 - Budget: INR 50,000
 - Remaining: INR 37,550
 - Ring color: Green (changes to amber at 70%, red at 90%)
- Projection line: "At current pace, projected spend: INR 38,200 (within budget)" in green text
- Daily spend sparkline chart below
- "Last call cost: INR 2.40 | Avg cost/call: INR 2.57"

SECTION 1 — "Global Limits" (settings card):

- Monthly Budget Cap: INR [50,000] (number input) — "Pause all campaigns when reached" toggle (ON)
- Daily Budget Cap: INR [2,500] (number input)
- Max Call Duration: [5] minutes — "Auto-terminate after limit"
- Silence Termination: [8] seconds — "End call after silence"
- Max Concurrent Calls: [15] (number input)
- Loop Detection: Toggle ON — "Detect and terminate repetitive AI responses"
- "Send alert at ___ % of budget" — Slider at 80%

SECTION 2 — "Per-Campaign Limits" (table):

- | Campaign | Budget | Spent | Remaining | Daily Cap | Max Duration |
|------------------|--------|-------|-----------|-----------|--------------|
| Jewellery Q2 | 15,000 | 8,200 | 6,800 | 500 | 5 min |
| Trading Outreach | 12,000 | 5,400 | 6,600 | 400 | 5 min |
| Collections | 8,000 | 4,100 | 3,900 | 300 | 4 min |
| NPS Survey | 5,000 | 1,200 | 3,800 | 200 | 3 min |
- Each row has progress bar showing spend vs budget
 - Edit icon per row

SECTION 3 — "Retry & Rate Limits":

- Max retries per lead: [3] (number input)
- Cooldown between retries: [4] hours
- Max calls per lead per day: [2]
- Max calls per lead per campaign: [5]
- DND compliance: Toggle ON (required, locked)

SECTION 4 – "Cost Breakdown" (mini table):

Component	Unit Cost	Today	This Month
AI Processing	INR 1.20/min	INR 890	INR 5,640
Telephony	INR 0.50/min	INR 370	INR 2,340
TTS/ASR	INR 0.40/min	INR 296	INR 1,870
Recording Storage	INR 0.10/call	INR 185	INR 1,170
Total	–	INR 1,741	INR 11,020

ALERT SECTION:

- Recent cost alerts (notification style):

"⚠ Campaign 'Trading Outreach' reached 80% of budget" – Yesterday

"✓ Monthly budget reset for April" – Apr 1

"⚠ High cost spike detected: 23% above average" – Mar 28

Style: Financial/admin dashboard with clear visual indicators. The budget gauge should be prominent and easy to read. Progress bars on campaigns should communicate urgency. Green/amber/red color system for budget health. Inter font, monospace for all currency values. Clean, authoritative, professional.

After Generation — Refine:

- Add real-time budget alerts via email/SMS/push
- Design budget forecast chart (projected vs actual)
- Add cost optimization suggestions from AI
- Add billing history and invoice download

Step 15 — Compliance & Consent Manager

Purpose: Configure consent capture, recording policies, AI disclosure requirements, DND compliance, and regional regulatory settings.

FIGMA MAKE PROMPT — Compliance Manager

Design a Compliance & Consent Management page for an AI calling platform. This admin page configures regulatory requirements.

HEADER:

- Title: "Compliance & Consent"
- Subtitle: "Configure AI disclosure, recording consent, and regulatory compliance"
- Status: "All compliant ✓" (green) or "Action needed ⚠" (amber)

SECTION 1 — "AI Disclosure Requirements" (card with red left border):

- "AI must identify itself" toggle: ON (locked, cannot be disabled)
- Disclosure text (editable): "Yeh call ek AI assistant dwara ki ja rahi hai"
- Timing: "Within first ___ seconds" — [15] (number input)
- "Must complete before proceeding to conversation" toggle (ON)
- Language variations:
 - Hindi: "Yeh call ek AI assistant dwara ki ja rahi hai"
 - English: "This call is being made by an AI assistant"
 - Marathi: (text input for translation)
- "Add Language" button

SECTION 2 — "Call Recording Consent":

- "Recording requires consent" toggle: ON
- Consent script: "Yeh call quality aur training ke liye record ki ja sakti hai. Kya aap sahmat hain?"
- "If consent denied:" radio buttons:
 - "Continue call without recording" (selected)
 - "End call and flag for human follow-up"
 - "Transfer to human agent"
- "Auto-enable recording after consent" toggle: ON

SECTION 3 — "DND (Do Not Disturb) Compliance":

- "Check DND registry before calling" toggle: ON (locked)
- DND provider: Dropdown "TRAI DND Registry"
- "Auto-scrub uploaded leads against DND" toggle: ON
- "Block calls to DND numbers" toggle: ON
- "DND override for existing customers" toggle: OFF
- Last DND sync: "April 1, 2026 at 6:00 AM" with "Sync Now" button

SECTION 4 — "Calling Hours Restrictions":

- "Enforce calling hours" toggle: ON
- Allowed hours: 9:00 AM — 7:00 PM (time pickers)
- Timezone: "Lead's local timezone" or "Fixed: IST"
- "No calls on national holidays" toggle: ON
- Holiday calendar: Link to "Manage Holiday List"

SECTION 5 — "Data Retention & Privacy":

- Call recording retention: [90] days (number input)
- Transcript retention: [180] days
- "Auto-delete after retention period" toggle: ON
- "Right to deletion: Enable customer data deletion requests" toggle: ON
- Export: "Export all compliance settings" button

AUDIT LOG (bottom section):

- Recent compliance events:
 - "✓ DND sync completed – 234 numbers blocked" – Today
 - "⚠ 3 calls attempted outside calling hours (auto-blocked)" – Yesterday
 - "✓ Consent captured for 89/92 calls (97%)" – Yesterday
 - "✓ AI disclosure verified for all calls" – Yesterday

Style: Legal/compliance admin interface. Red-bordered sections for mandatory items. Locked toggles should show a lock icon. The overall feel should convey seriousness and regulatory compliance. Clean, organized, professional. Inter font.

After Generation — Refine:

- Add compliance report generator (monthly PDF)
- Design regional compliance profile templates (India, US, EU)
- Add PII redaction settings for transcripts
- Add consent audit trail viewer

Step 16 — Standalone Mode — Lead Upload & Webhook Config

Purpose: For standalone SaaS deployments (without CRM integration), this screen handles lead ingestion and outcome delivery via CSV upload, API, and webhooks.

FIGMA MAKE PROMPT — Standalone Mode Setup

Design a Standalone Mode configuration page for an AI calling platform that operates without a CRM. This has two sections: Lead Ingestion and Outcome Delivery.

HEADER:

- Title: "Standalone Configuration"
- Subtitle: "Configure lead import and outcome delivery for non-CRM deployments"
- Mode indicator: "Running in Standalone Mode" (blue info banner) with "Connect to CRM →" link

TAB BAR: Lead Import | API & Webhooks | Field Mapping

TAB 1 — "Lead Import" (active):

- SECTION: "Upload Leads"
 - Drag-and-drop zone for CSV/Excel files (dashed border)
 - "Download Template" link
 - Recent uploads table:

File Name	Records	Status	Date	Actions
leads_april_batch1.csv	500	Imported ✓	Apr 1	View Log
mumbai_leads.xlsx	247	12 errors ⚠	Mar 29	View / Fix
collections_list.csv	300	Imported ✓	Mar 25	View Log
- SECTION: "API Ingestion"
 - API Endpoint: `https://api.nightangle.ai/v1/leads` (copy button)
 - API Key: `.....k4Fz` (show/hide toggle, regenerate button)
 - Code snippet tabs: cURL | Python | Node.js
 - Show a cURL example in monospace code block
 - Rate limit: "100 leads/minute"

TAB 2 — "API & Webhooks":

- SECTION: "Outbound Webhooks (Outcome Delivery)"
 - Webhook URL: Text input with "Test" button
 - Events to send: Checkboxes
 - ✓ Call Completed
 - ✓ Call Failed
 - ✓ Transfer to Human
 - Call Started
 - Retry Scheduled
 - Authentication: Dropdown (None, Bearer Token, HMAC)
 - Secret key: Text input (for HMAC)
 - Recent deliveries table:

Event	Status	Response	Time
call_completed	200 ✓	OK	2m ago
call_completed	200 ✓	OK	5m ago
call_failed	500 ✗	Timeout	15m ago
 - "View Full Webhook Log" link

- SECTION: "Hitech ERP Integration" (special card):
 - Integration status: "Connected ✓" (green) or "Not Connected"
 - ERP notification module endpoint
 - Sync settings: Toggle "Push outcomes to ERP"
 - Field mapping preview

Style: Developer-oriented settings page with code snippets and API documentation feel. Monospace for URLs, API keys, code. Clean tables for upload history and webhook logs. Inter font for labels, JetBrains Mono for technical content. Professional and functional.

After Generation — Refine:

- Add webhook retry configuration (max retries, backoff)
- Design the error log viewer for failed imports
- Add Postman collection download
- Add real-time webhook testing interface

Step 17 — Call Scheduling & Retry Logic Settings

Purpose: Configure when calls happen, how retries work, timezone handling, and queue management for campaigns.

FIGMA MAKE PROMPT — Scheduling & Retry

Design a Call Scheduling & Retry Logic settings page for an AI calling platform.

HEADER:

- Title: "Call Scheduling & Retry Logic"
- Subtitle: "Control when and how calls are made"

SECTION 1 — "Schedule Configuration":

- Calling window: Visual week grid (similar to Google Calendar availability):
 - Mon-Sat: Green blocks from 10:00 AM — 1:00 PM and 2:00 PM — 6:00 PM
 - Sunday: Gray (disabled)
 - Lunch break: 1:00 PM — 2:00 PM blocked out
- Click to edit time blocks
- Timezone handling: Radio buttons:
 - "Use lead's timezone" (selected)
 - "Use fixed timezone: IST"
 - "Use campaign timezone"

SECTION 2 — "Retry Logic":

- Visual retry flow diagram:
 - Call 1 → No Answer → Wait 4 hours → Call 2 → Busy → Wait 8 hours
 - Call 3 → No Answer → Mark as "Unreachable"
- Retry settings:
 - Max attempts: [3] (number input)
 - Wait between retries: [4] hours
 - Retry on: Checkboxes ☒ No Answer, ☒ Busy, ☒ Network Error,
 - Voicemail
 - "Increase wait time for each retry" toggle (ON)
 - Retry 1: 4h | Retry 2: 8h | Retry 3: 24h
 - "Try different time of day for each retry" toggle (ON)
 - Final disposition after all retries: Dropdown "Mark as Unreachable"

SECTION 3 — "Queue Management":

- Concurrent call limit: [15] (slider, 1-50)
- Call pacing: "Predictive" | "Progressive" (selected) | "Fixed Rate"
- Calls per minute: [8] (number input)
- Queue priority: Dropdown "FIFO" / "Score-based" / "Recent Activity"
- "Pause queue" emergency button (red outline)

SECTION 4 — "Smart Scheduling (AI-Powered)":

- "Best time to call" toggle (ON)
- Description: "AI analyzes past call data to determine optimal calling times for each lead"
- Chart: Heatmap showing best connection rates by day and hour (Mon-Sat on Y-axis, 9AM-7PM on X-axis, darker green = better)
- "Auto-optimize schedule based on data" toggle

Style: Settings page with visual scheduling components. The week grid should be interactive and visually clear. The retry flow diagram should be simple and scannable. The heatmap adds a smart data-driven element. Inter font, indigo accents. Clean and professional.

After Generation — Refine:

- Add per-campaign schedule override
- Design holiday/blackout date calendar
- Add queue position indicator for each lead
- Add predictive dialer settings

Step 18 — Empty States & Onboarding Screens

Purpose: Guide new users through first-time setup with encouraging empty states and onboarding flows.

FIGMA MAKE PROMPT — Empty States & Onboarding

Design 4 empty state screens for an AI Calling Engine module.
Each should guide users to take their first action.

EMPTY STATE 1 — "No Campaigns Yet" (campaign list page):

- Illustration: Minimal line art of a phone with sound waves emanating, dots connecting to people icons (indigo + gray, modern and abstract)
- Heading: "Launch your first AI campaign"
- Subtext: "Create an AI-powered calling campaign to automatically reach your leads. Set up an AI agent, choose your audience, and let the AI handle the conversations."
- Buttons: "Create First Campaign" (indigo), "Watch Tutorial" (outline)
- Below: "Start with a template:" followed by 3 small template cards in a row: "Sales Outreach", "Collections", "Customer Survey"

EMPTY STATE 2 — "No AI Agents" (agent studio):

- Illustration: Abstract bot/brain icon with configuration gears (violet + gray)
- Heading: "Build your AI calling team"
- Subtext: "Create AI agents with unique personalities, voices, and skills. Each agent can handle different types of calls — from sales to support to collections."
- Buttons: "Create First Agent" (indigo), "Browse Agent Templates" (text link)

EMPTY STATE 3 — "No Recordings" (call library):

- Illustration: Waveform/audio visualization (indigo gradient, minimal)
- Heading: "Your call recordings will appear here"
- Subtext: "Once your campaigns start making calls, all recordings and transcripts will be stored here for review, search, and training."
- Button: "Go to Campaigns" (outline)

EMPTY STATE 4 — "First Time Dashboard" (command center):

- Welcome card: "Welcome to AI Calling Engine"
- Setup checklist (vertical stepper):
 - Step 1: "Create your first AI Agent" (link) — ○ Not started
 - Step 2: "Set up compliance & consent" (link) — ○ Not started
 - Step 3: "Configure budget limits" (link) — ○ Not started
 - Step 4: "Upload or connect leads" (link) — ○ Not started
 - Step 5: "Launch your first campaign" (link) — ○ Not started
- Progress: "0 of 5 completed"
- Right side: "Need help?" card with links to docs, video tutorial, and support chat

Each empty state centered with generous whitespace. Illustrations should be subtle, professional line art in indigo/violet palette. Not cartoonish. Modern and encouraging.

Style: Minimal, warm, professional. Similar to Linear or Notion

| empty states. Inter font, indigo primary color.

After Generation — Refine:

- Add tooltip-based guided tour overlay for first visit
- Design progressive disclosure (unlock features as setup progresses)
- Add celebration micro-animation when first campaign launches
- Add “Skip Setup” option for advanced users

Part 4 — Prototype Routing & Interaction Map

4.1 Primary Navigation Flows

Connect these screens in Figma Make prototype mode:

Sidebar "AI Agents" click
→ AI Calling Dashboard (Command Center) [Step 1]

Dashboard → "Start New Campaign" button
→ Campaign Builder Wizard [Step 3]

Dashboard → "View All Live Calls" link
→ Live Call Monitor [Step 6]

Dashboard → Campaign card click
→ Campaign Manager → Campaign Detail

Dashboard → Agent card "Configure" click
→ Agent Behavioral Profile Editor [Step 5]

Sidebar "Campaigns"
→ Campaign Manager List [Step 2]

Campaign Manager → "Create Campaign"
→ Campaign Builder Wizard [Step 3]

Sidebar "AI Agents"
→ AI Agent Studio [Step 4]

Agent Studio → Click any agent card
→ Agent Profile Editor [Step 5]

Sidebar "Live Monitor"
→ Live Call Monitor [Step 6]

Live Monitor → Click any completed call
→ Call Detail & Transcript [Step 7]

Live Monitor → "Accept Transfer" on escalated call
→ Human Handoff Queue [Step 11]

Sidebar "Call Library"
→ Recording & Transcript Library [Step 13]

Call Library → Click any row
→ Call Detail & Transcript [Step 7]

- Sidebar "Analytics"
 - Call Analytics Dashboard [Step 12]
- Settings → "Conversation Flows"
 - Flow Builder [Step 8]
- Settings → "Prompt Templates"
 - Prompt Editor [Step 9]
- Settings → "Inbound Calls"
 - Inbound Setup [Step 10]
- Settings → "Cost & Budget"
 - Cost Governance [Step 14]
- Settings → "Compliance"
 - Compliance Manager [Step 15]
- Settings → "Standalone Mode"
 - Lead Upload & Webhooks [Step 16]
- Settings → "Scheduling"
 - Call Scheduling & Retry [Step 17]

4.2 Interaction & Animation Rules

Interaction	Animation	Duration
Page navigation	Fade in with subtle slide-up (8px)	200ms ease-out
Wizard step transition	Slide left/right	300ms ease-in-out
Modal open (call detail)	Fade in with scale from 95%	200ms
Side panel (agent editor)	Slide in from right	300ms ease-out
Tab switching	Instant swap, underline slides	150ms
Call card hover	Subtle lift (2px shadow increase)	150ms
Live pulse indicator	CSS pulse animation (cyan glow)	1.5s infinite
Waveform animation	CSS keyframe bars oscillating	Continuous
Button states	Default → Hover (darken 8%) → Active (darken 15%)	100ms
Toast notifications	Slide in from top-right, auto-dismiss	300ms in, 5s visible
Transfer alert	Card border pulse (red glow)	1s infinite

Part 5 — Design Execution Timeline (4-Week Sprint)

Phase 1 — Foundation & Core Screens (Week 1)

- Generate AI Calling Dashboard [Step 1]
- Generate Campaign Manager list [Step 2]
- Generate Campaign Builder wizard [Step 3]
- Generate Empty States & Onboarding [Step 18]
- Establish design tokens, spacing, and component patterns
- Review and iterate with stakeholders

Phase 2 — AI Agent & Live Operations (Week 2)

- Generate AI Agent Studio [Step 4]
- Generate Agent Profile Editor [Step 5]
- Generate Live Call Monitor [Step 6]
- Generate Call Detail & Transcript [Step 7]
- Generate Human Handoff Queue [Step 11]
- Wire up prototype routing for core flows

Phase 3 — Configuration & Intelligence (Week 3)

- Generate Conversation Flow Builder [Step 8]
- Generate Prompt Template Editor [Step 9]
- Generate Inbound Call Setup [Step 10]
- Generate Recording Library [Step 13]
- Generate Call Scheduling & Retry [Step 17]

Phase 4 — Admin, Analytics & Polish (Week 4)

- Generate Call Analytics Dashboard [Step 12]
- Generate Cost Governance [Step 14]
- Generate Compliance Manager [Step 15]
- Generate Standalone Mode config [Step 16]
- Polish all screens for consistency (spacing, colors, fonts)
- Complete prototype routing across all 18+ screens
- Record walkthrough video and stakeholder review

Part 6 — Post-Design Handoff Checklist

Design Deliverables

- ☐ Export design tokens as JSON (colors, spacing, typography, radii)
- ☐ Create shared component library (buttons, inputs, cards, badges, agent cards, call cards)
- ☐ Document all state variations (hover, active, disabled, loading, error, empty)
- ☐ Document real-time update patterns (WebSocket events, polling intervals)
- ☐ Create animation/transition specification sheet

Engineering Handoff

- ☐ Map each screen to backend API endpoints from Module 4 BRD
- ☐ Document WebSocket event contracts for live call monitoring
- ☐ Define telephony provider integration interface
- ☐ Map AI agent configuration schema to database model
- ☐ Document call state machine transitions for frontend state management

Stakeholder Sign-Off

- ☐ Product review (Shivam) — feature completeness and UX flows
- ☐ Backend review (Akash) — API feasibility and data model alignment
- ☐ AI team review — agent configuration UI covers all required parameters
- ☐ Compliance review — consent flows and regulatory settings are complete
- ☐ Client reference validation — compare against TeleCRM and existing workflows

Task Creation

- ☐ Create JIRA/Linear tickets for each screen's frontend development
- ☐ Prioritize by P0 → P1 → P2 from the screen inventory
- ☐ Estimate frontend development effort per screen
- ☐ Identify shared components that can be built once and reused across modules

End of Document

This plan covers 18 detailed Figma Make prompts generating 24+ screens for the complete AI Calling Engine module.
